Join the Team!

Gilmour Academy is committed to building and sustaining a culture of excellence in the classroom, in competition, and in the community. Participation in athletics plays an important role in that and has long been a vibrant part of the Gilmour experience. More than 85% of students participate in at least one sport at Gilmour and we believe it plays a major role in developing their character. It places an emphasis on teamwork and personal development, and fosters our sense of community through spirited competition.

To help provide our student-athletes with every opportunity to realize their full potential we are embarking on a project to renovate Weber Stadium and the athletic facilities and amenities within it. Given the age and condition of our current stadium, synthetic turf field and all-weather track, we plan to upgrade and replace these facilities in a multi-phase project, which will include: repave the all-weather track; replace the current synthetic multi-sport turf with new, state-of-the-art turf and infill; new scoreboard; replace the home and visitor grandstands with new stands, accessible to all of our fans; build a new stadium complex facilities building that will include new locker rooms and other stadium amenities.

Please join the team today and be a part of this important opportunity for Gilmour. Each phase of the project will begin when funding for that phase is completed. To begin construction on the new field and track this summer we need to meet our Phase I goal of $1,500,000 by April, 2019. This will ensure that we can practice and play home games this fall and home meets next spring. Show your support and make a gift now!

Since its founding in 1946, Gilmour Academy’s campus has always benefitted from the generous support of our community. As resources became available through donor support, the school has always strived to make necessary enhancements to improve the student experience in and out of the classroom. When Weber Stadium was dedicated in 1982, it improved the game time experience for athletes and fans alike.

In 1995, the cinder track was replaced with a state-of-the-art all-weather track, providing our runners with a consistent and dependable surface. At the same time, the athletic field was regraded with dirt from a local highway project, but remained natural grass, often muddy from the wet northeast Ohio weather. In 2004, the grass field was replaced with synthetic turf and the 10-year-old track was resurfaced. All of these improvements were funded entirely by donations from generous alumni, families and friends.

Fifteen years later, the time has come to once again update our facilities and your advocacy and support for this project are critical to its success. Every gift, no matter the size, will help see this initiative through to completion. Help us foster Lancer pride and give our students access to the best facilities available. This capital improvement project will allow for better and safer surfaces for practice and competition.
